

PROFILE

A highly motivated and determined software developer with a strong interest in building web applications.

I enjoy working collaborative environments, challenged by complex problems as it gives me the opportunity to improve my skills and learn new approaches from my peers.

I enjoy solving complex problems, taking an idea from concept to release and seeing the impact it has on my users. It's a great motivator for me and what makes my career choice an motivating and exciting option for me.

SKILLS

JAVA 8 (Including Spring)

HTML5 / CSS 3

JAVASCRIPT

SQL

LINUX

ANGULAR JS (V1)

NODEJS

REACT

EDUCATION

SEPT 2010 - JUN 2014

BSc Computer Science

Heriot-Watt University - Edinburgh

Awarded: First Class Honours

INTERESTS

- Board Gaming
- Video Gaming
- Going to the Cinema

ANDREW FLEMING

SOFTWARE DEVELOPER

Address : Flat 2, 4 New Mart Gardens, Edinburgh, EH14 1TZ

WORK EXPERIENCE

SEPT 2017 – PRESENT

Java Development Consultant | *Broadridge Financial Solutions - Edinburgh*

Working with Solution Architects, I implemented new features and triaged issues within the firm's Securities Finance Solution, based on Java 8 EE. This includes writing automated unit tests to prevent regression in the platform. I also peer-reviewed code for fellow developers to support standardisation.

I also had the opportunity to rapidly learn some C#.NET to do implementations on the UI layer of the application.

MAR 2017 – AUG 2017

Software Engineer | *QikServe – Edinburgh*

Working in a small team as part of a start-up. I implemented and developed new functionality for QikServe's platform, built on Java 8 EE.

Work included making additions to QikServe's REST API and optimisation of JSON payloads to support quicker loading of menu information within the companies self-service kiosk and mobile applications.

SEPT 2014 – MAR 2017

Application Developer – Analyst | *J.P Morgan Chase - Glasgow*

As part of the Technology Graduate programme, I worked on a few key development projects mainly focusing on the automation and improvement of internal processes

The main projects I worked on included:

- A UI refresh of an Environment Inventory and Self Service tool built as a Java Web application
- Creating an automated self-certification tool to confirm environments being used are and are optimised for the users needs.
- Created an on-boarding tool using AngularJS to enable users to automatically

I also took part in a charity project in which I led a team to build an Android app. This application supported the charities service users to do independent journeys.

A copy of this app can be made available on request.

SEPT 2012 – JUN 2014

Communications Assistant | *Heriot-Watt University Student Union - Edinburgh*

During my studies at Heriot-Watt, I had the opportunity to work with the Student Union to improve their online presence. My main focuses were building new functionality onto the website such as live opening times of the Union's facilities and an online booking system for the Union's meeting and event rooms.

During my final months with the Union, I spearheaded a project to completely revamp the Union website using frameworks such as Bootstrap and using new standards such as HTML5 and CSS3.
